Preprinted & Encoded EPC Gen2 RFID Labels

Data Structure: DOD-96 bit
Label Size: 4" Wide, 3" Total Height with 2 perforated label sections (4x2, 4x1). RFID tag is in the 4x2 section.
Label Material: Face stock (Printable Surface) has been independently tested to be ESD resistant to 10KV, and is produced of an expanded synthetic material to provided extra mechanical buffering for the RFID chip.

Serialization Schema: Each tag's encoded information includes an auto-generated production date (YYMMDD) as a prefix to the user defined serial number range. This guarantees that the S/N will remain unique during future re-orders of labels.

Linear Bar Code Type: Code 39 is used to maintain conformance to MIL-STD-129 should these labels be used as RFID amendments to other formal MIL-STD-129 shipping labels.

Enter the following Information to define your order requirements:

Printed Company Name, Division/ Location	
CAGE Code to use for RFID encoding	
RFID Filter Type Number [0, 1, or 2] CASE (1) , is Honeywell default PALLET (0), ITEM (2)	
Starting S/N Sequence Number S/N = YYMMDD + Seq# [00001 is default]:	
Quantity of RFID labels [auto-serialized by 1]:	
Required By Date	
Shipment Address	
Contact Name, Phone, Email	

Submit this form either via FAX (425-438-8764), or supply the form's requested information via email to rsovay@id-integration.com . If ordering by Credit Card, please contact Rose Sovay at 425-438-2533 to supply your card's processing information.
